

2nd German American Energy Conference 2010

March 22 - 23, 2010 in Berlin

Christoph Graser

Section Manager Standardization and Regulation Management
Siemens AG Energy Sector Muelheim an der Ruhr (Germany)

After completion of his studies in electrical engineering in 1989, Christoph Graser had been working for over 17 years in various places in the German electricity utility sector. Professional activities were covering all aspects of electrical energy supply, i.e. conventional power generation, electricity transmission and distribution systems, including renewable energy technologies, embedded generation, as well as the connection of such units to the electricity supply system.

Christoph Graser has gained a long track of experience in national and international standardization, mainly dealing with horizontal issues (e.g. quality and environmental management systems, general safety, quality and system aspects of electrical energy supply), as well as in national and European regulatory affairs (European safety directives and environmental legislation). He was also involved in the development of management system standards, in particular ISO 14001. In 2007, he has assumed the chairmanship of the DIN committee "Energy Efficiency and Energy Management", mirroring all international standardization activities in that area.

In May 2006, Christoph Graser has joined the Power Generation business group (now part of the Energy Sector) of Siemens AG, where he has taken the lead of the Standardization and Regulation Management section within the Steam Turbine Engineering organization. As manager of this section, he is responsible for the overall coordination of standardization and regulatory affairs of the global steam turbine engineering network. As part of the organization's process management, the Standardization and Regulation Management group has also the responsibility to look after horizontal issues closely linked to standardization and regulation, e.g. general product safety and environmental aspects in business processes.

Christoph Graser was born in 1964, he is married, and has two daughters at the age of 10 and 14 years.
